                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sendai virus.";
Virology 184:227-234(1991).
-:- FUNCTION: PROBABLE COMPONENT OF THE ACTIVE POLYMERASE. IT MAY
FUNCTION IN MRNA SYNTHESIS. CAPPING, METHYLATION AND POLY(A)
SYNTHESIS OF NEWLY SYNTHESIZED VIRAL MRNAS, RNA EDITING OF THE P
GENE TRANSCRIPT, AND PROTEIN KINASE ACTIVITY.
-:- MISCELLANDOUS: THEY ARE POUND IN CATALYTIC AMOUNTS (APPROXIMATELY
20 TO 30 COPPIES PER SENDAI VIRION) IN VIRAL NUCLEOCAPSIDS.
-:- SIMILARITY: WITH L PROTEIN OF OTHER PARAMYXOVIRUSES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ď

FRAPIG Sequencing of the Sendal virus 6.8 kb large (L) gene through primer walking with an anomated DNA sequencer.";
J. virol. Methods 38:47-60(1992).
FUNCTION IN ROBABLE COMPONENT OF THE ACTIVE POLYMERASE. IT MAY FUNCTION IN MENA SYNTHESIS. CAPPING, METHYLATION AND POLY(A) SYNTHESIS OF NEWLY SYNTHESIZED VIRAL MENAS. RNA EDITING OF THE P GENE TRANSCRIPT, AND PROTEIN KINASE ACTIVITY.
FUNCTION IN WAS ARE FOUND IN CAPALYTIC AMOUNTS (APPROXIMATELY OF THE P ACTIVE AND THE P ACTALYTIC AMOUNTS (APPROXIMATELY OF THE P ACTIVE NIROL) IN VIRRL NUCLEOCAPSIDS.
SIMILARITY: WITH L PROTEIN OF OTHER PARAMYXOVIRUSES.

SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0) HAS THREE MAIN SUBUNITS: A, B AND C (BY SIMILARITY).
SIMILARITY: BELONGS TO THE ATPASE ALPHA/BETA CHAINS FAMILY.
                                                                                                                                                                                                                                                                                                                                                               Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     contig of 847 bp in length gap of unknown length contig of 941 bp in length gap of unknown length gap of unknown length gap of unknown length

                                                                                                                                                                                                                                                                                                                    Wolf,M., Geczi,A., Simon,O. and Borriss,R.
Genes encoding xylan and beta-glucan hydrolysing enzymes in
Bacillus subtilis: characterization, mapping and construction of
strains deficient in lichenase, cellulase and xylanase
Microbiology 141 (Pt 2), 281-290 (1995)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /gene="yoaA"

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 33 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                              contig of 186 bp in length

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons and the calculated codon adaptation index (CAI) is given for each CDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              URL, http://www.sanger.ac.uk/Projects/S_pombe/)
Protein coding regions (CDS) have been predicted with the help of computer analysis using the Genefinder program in PomBase (an ACEDB database) with additional predictions for the branch-acceptor sites supplied by the program Sp3splice. CAUTION: It is possible that for any individual CDS we may have undersetimated or oversetimated the number of introns/exons or we may not have chosen the correct splice donor/acceptor sites. CDS are numbered using the following system as SPATHO.01c. SP (S. pombe), A (chromosome 1), cSH10 (cosmid name), .01 (first CDS), c (complementary strand). The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS. IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid c961

New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter for the diagnosis.

PT for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases associated with these insolated from Helicobacter pylori and encodes a H.Pylori GHPO protein.

The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, and gastric and duodenal ulcers. They can also be used for detection and diagnosis.

Cor the production of antibodies. The products can also be used for detection and diagnosis.

A computer readable medium has been developed which has recorded on it computer readable medium has been developed which has recorded on it Set nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences who as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring
                                                                                                                                                                                       (KAGO) KAGOME KK.

New chitinase enzyme and coding sequence - cleaves beta-1,4-glycoside bond of chitin but has no beta-N-acetylhexosaminidase activity claim 11: Page 21-23: 66pp; Japanese.

The sequences given in O56756-61 encode chitinase derivatives which cleave the beta-1,4-glycoside bond of chitin but have substantially no beta-N-acetylhexosaminidase activity. These sequences may be introduced into yeast and cultured for the production of the

used to
progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                claim 8: Page 48: 105pp; English.

The promoter (T33641) of the arabinofuranosidase gene of Aspergillus niger 3M43 was identified in a full-length gene (T33645) isolated from a genomic DNA library. The promoter is strongly repressed by glucose and induced by intermediates of xylose metabolism. It can be used to control the expression of a gene of interest, e.g. A. niger arabinofuranosidase or a heterologous gene, in a host sectil, pref. Aspergillus or a transgenic plant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The Aspergillus niger 3M43 arabinofuranosidase gene (T33646) codes for the precursor form (W00810) of the arabinofuranosidase enzyme. It was isolated from a genomic DNA library by screening with a PCR clone obtd. by amplification of A. niger DNA using primers (see also T33644-45) based on an isolated peptide (W00806) the enzyme. The mature enzyme coding sequence (see also T33640) can be used for prodn. of arabinofuranosidase (W04167) in transformed hosts, pref. Aspergillus or a transgenic plant. The promner of arabinofuranosidase (Grafia) may also be used to control expression of the arabinofuranosidase gene, or other gene of interest, in a host
Aspergillus arabinofuranosidase gene.

A computer readable medium has been developed which has recorded on it
C acomputer readable medium has been developed which has recorded on it
S12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences, also known as configs. The computer-based system
can identify fragments of the Enterococcus faecalis genome with
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcal infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vaccines, drug screening, etc.

Claim 5; Page 156; 354pp; English.

X30724 to X30946 represent genomic DNA sequences isolated from
Streptococcus pneumoniae strain 0100993. These genomic DNA sequences
encode the novel proteins given in Y11114 to Y11367. The proteins,
Esolated from Streptococcus pneumoniae, can be used in vaccines against
streptococcal infections and in assays for identifying compounds that
inhibit or activate the activity of the proteins. The antagonists can
be used to treat an individual having need to inhibit a bacterial
protein. Vectors expressing the proteins can be used to induce a
protective immune response in mammals.

Sequence 593 BP; 206 A; 76 C; 117 G; 194 T;
New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae genomic DNA sequence SEQ ID NO:169. Streptococcus pneumoniae strain 0100993; vaccine; immune response; streptococcal infection; pneumococcal; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acids encoding pneumococcal polypeptide(s) - useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1913 G;

Streptococcus pneumoniae polynucleotides - useful for developing products for diagnosis, prevention and treatment of infections e.g. pneumonia, bacteremia, meningitis or endocarditis Claim 1: Page 55: 181pp; English.

The sequence is that of a Streptococcal polypeptide coding region. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection. It may be used for the treatment of diseases such as otitis media, conjunctivitis, pneumonia, bacteramia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrospinal fluid. Sequence 1975 BP: 517 A; 524 C; 379 G; 555 T;

This sequence represents that encodes the enzyme kappa-carrageenase.
This sequence represents that encodes the enzyme kappa-carrageenase.
The sequence represents that encodes the enzyme kappa-carrageenase.
The sequence was isolated from a C. drobachiensis genomic library based on growth activity on mediuum containing carrageenan. From the screens of the library, 5 final positive clones were isolated, each contained the present sequence as an insert. The enzyme acts on kappa-carrageenans of produce oligo-carrageenans. The invention relates to the isolation of genes coding for glycosyl hydrolases, which, when subjected to produce oligo-carrageenas. The invention relates to the isolation of genes coding for glycosyl hydrolases, which, when subjected to hydrophobic cluster analysis (HGA) together with Alteromonas carrageenover kappa-carrageenase, give an HGA score of at least 75% in the domain between positions 117 and 262 of the kappa-carrageenase amino acide sequence. The enzymes can be used to convert carrageenase amino acide growth factor binding antagonists. Oligocarrageenas have an (unspecified) action on keratinocyte proliferation, fibroblast contractile power and adhesion, growth and protein synthesis in human cell cultures, and elloit enzyme markers of growth or phenolic defence metabols man account of growth or phenolic defence contractile power and adhesion, growth and protein synthesis in human cell cultures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-5EP-1998 (first entry)

Claim 9: Page 977-978; 989pp; English.

The present sequence encodes 3 Staphylococcus aureus proteins of unknown function and a protein, that, based on homology with a known Staphylococcus aureus protein, is believed to be an autolysin (EC 3.5.1.28) (N-acetylmuramoy1-L-alanine amidase).

The present sequence was obtained from a library of clones of S. aureus WGUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect
                                                                                                                                                                                                                                                                                                         nseq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.

produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection sequence 3110 Bp; 1111 A; 488 C; 6/6 G; 832 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid sequences from Staphylococcus aureus WCHU29 - useful in vaccines and for treatment of bacterial infections of e.g respiratory tract and central nervous system
Claim 1; Page 214-216, 390pp; English.
This sequence encodes 2 Staphylococcus aureus proteins of unknown function, and represents a DNA Sequence of the invention.
The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771), Host cells containing the DNA sequences are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcus pneumoniae genome fragment SEQ ID NO:176.

Claim 1; Page 1108-1110; 1409pp; English.

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the present invention describes a computer to a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391. The nucleotide of any of the fragments of the S. pneumoniae genome (SEQ ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising; (a) screening a genome (DN ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising the sequence defined by any of the sequences in SEQ ID NO: 1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating ments derived from the fragment to the S. pneumoniae genome to prime the amplification and isolating the amplified sequence. The computer readable medium can be used in a computer based system for identifying fragments of the S. pneumoniae genome. Products from the present compositions and vaccines for S. pneumoniae, or expression modulating c fragments of the S. pneumoniae genome. Products from the present compositions and vaccines for S. pneumoniae.

Sequence 1384 BP: 1241 A. SAG C. 662 G. 1214 T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 26: Page 40-42; 84pp; English.

This nucleotide sequence comprises novel human tumour rejection antigen precursor (TRAP) MAGE-C1 CDNA (see also V69720). MAGE-C1 is a novel member of the MAGE family that may be recognised by cytotoxic T cells, leading to lysis of the tumour cells which express it. MACE-C1 and MACE-C2 (see W81546-47) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells. The MAGE-C1 CDNA was isolated from a melanoma LB373-MEL cDNA library using a probe generated from LB-373-MEL RA by PCR (see V69728-29). It shows homology to MAGE-A1 cDNA (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            05-NOV-1998.

WACE-C1 gene was localised to chromosome region Xq26-q27. MACE-C1 and MACE-C2 consists (see V69726) are claimed, as are: expression and MACE-C2 consists (see V69726) are claimed, as are: expression vectors; transformed or transfected cell lines (e.g. COS and CHO); as say comprising an ollopouclectide having a sequence of nuclectides 18-34 of the 4031 bp MACE-C1 cDNA and an ollopouclectide having a sequence which is complementary to nuclectides 200-217 of having a sequence; a method for determining expression of a MACE-C1 gene using the kit; a polytope comprising a number of tumour rejection antigens derived from MAGE-C1 or MAGE-C2 and a polytope comprising at least one tumour rejection antigen derived from MAGE-C1 or MAGE-C2 and at least one tumour rejection antigen derived from mace other tumour rejection antigen derived from MAGE-C2 and at least one tumour rejection antigen determining the presence of cytolytic T cells specific for complexes of a human leukocyte antigen (HLA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This nucleotide sequence encodes novel human tumour rejection antigen precursor (TRAP) MAGE-C1 (see W81546). MAGE-C1 is a novel member of the MAGE family that may be recognised by cytotoxic T cells, leading to lysis of the tumour cells which express it.

MACE-C1 and MACE-C2 (see W81547) are expressed in a variety of tumours and in normal testis cells, but not by other normal cells. The MAGE-C1 cDNA was isolated from a melanoma L8373-MEL cDNA by CR amplification (see V69732-33). It shows homology to MAGE-A1 cDNA (see V69719). The MAGE-C1 gene was localised to Xq26-q27.

MACE-C1 and MACE-C2 CDNAS (see V69726) as a re:
capression vectors; transformed or transfected cell lines (e.g. COS and CHO); an isolated TRAP encoded by the CDNAS; a kit useful in a PCR based assay; a method for determining expression of a MACE-C1 contrainty expression of a MACE-C1 contrainty of a mace-C1 centing the kit; a polytope comprising a number of tumour rejection antigens derived from MAGE-C1 or MAGE-C2; and a polytope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tumour rejection antigen precursors - used for determining presence of cytolytic I cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-MAR-1999 (first entry)
Tumour rejection antigen precursor MAGE-C1 cDNA.
MAGE-C1; human; tumour rejection antigen precursor; TRAP; therapy; diagnosis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length: 13

Staphylococcus aureus contig SEO ID #20.
Computer readable medium; vaccihe; S.aureus infection; immunodetection; collulitis; eyelid infection; food poisoning; osteomyelitis; therapy; skin infection; surgical wound infection; scalded skin syndrome; toxic shock syndrome; ds.
comprising at least one tumour rejection antigen derived from MAGE-Cl or MAGE-C2 and at least one other tumour rejection antigen. MACE-C1 and MACE-C2 can be used in a method for determining the presence of cytolytic T cells specific for complexes of a human leukocyte antigen (HLA).

Tatti-S. aureus vaccines

Tatti-S. aureus vaccines

This sequence represents one of 5191 Staphylococcus aureus DNA sequences

This sequence represents one of 5191 Staphylococcus aureus DNA sequences

of the invention. The DNA sequences are recorded on a computer readable

medium, preferably selected from a floppy or hard disk, random access

mency (RAM), read-only memory (ROM) or CD-ROM. Homology searches using

the S. aureus DNA sequences allows putative functions to be assigned so

that protein-encoding or regulatory regions of commercial, therapeutic or

industrial importance can be obtained "Specifically, sequences which are

likely to encode antigens have been identified and these polypeptides can

be used in a vaccine composition against S. aureus infection. The

collypeptides can also be used in a kitt for the immunodetection of

S. aureus in a sample. S. aureus is implicated in numerous human diseases,

including cellulitis, eyelid infections, food poisoning, osteomyelitis,

skin and surgical wound infections, scalded skin syndrome, toxic shock

syndrome, etc. Organisms transforamed with the DNA sequences can be used

for recombinant production of the polypeptides. The new DNA sequences

computer readable medium.
